IBM i2 Enterprise Insight Analysis for Defense Intelligence

Raf Verhooghen, Sr. IBM i2 Consultant

As national security and defense threats become more complex, intelligence organizations and agencies are challenged to respond more efficiently and precisely. Attend this session and discover how extensive data acquisition and multifaceted i2 analysis & visualisation capabilities can help Defenses worldwide to strengthen their Intel position and be timely prepared for complex missions and operations.

11:00

Cybercrime as a service

Sjoerd van der Meulen, Cybersecurity Specialist & Trainer & Ana-Maria Oniceanu, Manager Analytics

Cybercrime is big business. But what is the business plan of a cybercriminal? Does a cybercriminal go through the same phases as a start-up or is it hit-the-ground-running? And how does he/she deal with obtaining start-up capital, the 'service' and staff expansion or other daily relevant questions and procedures? You will get answers to these questions and more when we step into the shoes of a cybercriminal during this session. Our CCO (Chief Cybercriminal Officer) will take you through the business plan, the way of thinking, the toolkit and the decision moments that make his/her business successful. In parallel, the opportunities for investigation at the law enforcement side will be highlighted on how to detect, disrupt or stop the cybercrime business plan.

13:00

IBM i2 Use Case for municipalities

Dutch session

Freek Edeling, Lead analyst gemeente Leiden & Edwin Metgod, Manager Analytics DataExpert

What if you have the obligation to fight subversive crime in your city, together with partners. What if the dataload and case load is as big as can be? What if there would be a better way of working than doing the data gathering, analysis and reporting manually? Gemeente Leiden took on the challenge and implemented VIK (Veiligheids Informatie Knooppunt) together with IBM i2 solutions and the help of DataExpert.

Curious about their journey, experiences and the actual results they have managed to get out of it? Lead analyst of Gemeente Leiden, Freek Edeling will take you with him on his path to success and a more efficient way of working with desperate data in his field of work!

14:00

Why threat intelligence is key for automation of the SOC

Magnus Lundgren, sales director EMEA Recorded Future

Many security people think "I cannot make use of Threat Intelligence - I have no time or team for that". Well, things change and you should think "I cannot work without Threat Intelligence - I have no time or team". Threat Intelligence used to be reports that you could read over the weekend and get a good understanding of the overall threat landscape. There are still great reports out there but things are way different today - Security intelligence fully integrates in your day-to-day operations - you will supercharge your manual work.

15:00

Earn €500,000 with phishing

Sjoerd van der Meulen, Cybersecurity Expert

Everyone has received one or more phishing messages in the past year, via e-mail or SMS. In most cases the damage is limited, but in some cases a huge amount of money is stolen. This way of phishing is also known as spear phishing, CEO fraud or whaling. By using Cybercrime As A Service as a cybercriminal, an attack like this can be set up by anyone. Yet some attacks prove more sophisticated than others. During this session we take the participants into the different techniques behind this attack and the traces that are being made. After all, invisible online does not exist and Cybercrime is no magic.
